

**GENESAL
ENERGY**

Distributed energy as a future pillar of industry

 **CETED**
CENTRO TECNOLÓGICO DE ENERGÍA DISTRIBUIDA

The Centre for Distributed Energy (CETED) is a key instrument for the provision of energy based solutions through engineering and innovation in generating sets individually adapted to the customer's needs.

**Pioneers in personalised
generator sets.**

At Genesal Energy we have the energy to adapt to every possible situation.

For more than 20 years we have been committed to the energy sector.

CETED was created to give us the conditions for **providing solutions both advanced and personalised**, as well as project viability assessments, detailed planning, execution and on-site commissioning with our own expert engineers.

We are experts in specialised generator set development.

Innovation and a vision for the future: two of our key identifying features.

For the first time in the energy industry, a manufacturer has distanced itself from the concept of production by series and volume **to offer their customers generator sets with unique and adapted characteristics.**

We are the FIRST Spanish company in our sector to obtain UNE166002 certification in R&D&I Management Systems.

PYME INNOVADORA

**Management of all
R&D&i processes in the
energy sector.**

Management and development of projects and our portfolio of ideas.

Complete project management, **from the birth of an idea to its commercial phase, ensuring that each phase** in between is correctly executed and adheres to quality control processes.

Implementation of management systems and certification procedures.

CETED provides support in the establishment and maintenance of management systems, as well as **obtaining the related certificates for R&D&i projects.**

Operational management of R&D&i.

Administrative management, contact with public administrations and project **certification form a part of the CETED operational management.**

Management of laboratories and testing facilities.

Design and development of the tests to be executed during the different project phases. **Management of in-house laboratory** where testing is carried out.

In-house training facilities.

CETED coordinates the training offered by GENESAL ENERGY, not only in the Genesal technical classroom, but also in other facilities where **our professionals share their knowledge and experience in the field of distributed energy.**
